

SL NO.	LIST OF EXPERIMENTS
•	Program on basics of python Programming Language. 1. How to run Python program by using command prompt 2. Write a program to print "Hello World" by using Python 3. Write a program to add two numbers 4. Write a program using if-else 5. Write a program using nested if-else 6. Write a program using while loop 7. Write a program using break and continue 8. Write a program using for loop 9. Write a program using nested loop
•	Program on basic Data Structures in Python. 1. Write a python program to find the second largest number in a list of integers. 2. Write a python program to find the common elements among two sets. 3. Write a python program that inverts the keys and values of a dictionary. If multiple keys have the same value, store the keys in a list.
•	Program on Conversion from one data type to another. 1. Write a python program to convert a list to a set to remove duplicates. 2. write a python program to check whether the variable is a number or not and then convert it into string.
•	Program on Functions in Python. 1. Write a program to show all the operation of a calculator using function. 2. Define a function to check whether a number is Armstrong or not. 3. Define a function to calculate compound interest.
•	Program using Object Oriented Programming in Python. 1. Write a program to show the details of students using object and class. 2. Write a program to show the details of employee using object and class. 3. Write a program to show the details of faculty using object and class. 4. Write a program to create a class representing a circle. Include methods to calculate its area and perimeter. 5. Write a program to create a class representing a shopping cart, include methods for adding and removing items and calculating the total price.
•	Program using Inheritance in Python. 1. Write a program to demonstrate inheritance
•	Program using String in Python. 1. Write a program to check whether a variable is string or number.
•	Program using Regular expression in Python. 1. Write a program using regular expression to extract in various formats from a given text. 2. Write a program to replace text using regular expression. 3. Write a program using regular expression to validate email address.

- **Program using File Handling in Python.**

1. Write a program that demonstrates how to read data from a text file.
2. Write a program that demonstrates the use of try-except to handle file-related errors.
3. Write a python program that demonstrates how to append content to a existing file.

- **Program using basics of Pandas and Matplotlib module in Python.**

1. Write a program that demonstrates basic operations using the pandas library to read and display data, as well as calculate descriptive statistics such as mean, median and standard deviation
2. Write a program that show how to filter and manipulate data such as selecting rows based on certain conditions.
